Data Center Capacity
Installed Data Center Capacity in Gigawatts
Total 122.2GW
U.S. 53.7GW
1.5GW Other N. America
UK 2.6GW
EU 11.9GW
1.2GW Eurasia
Middle East 1.1GW
China 31.9GW
Japan/ S. Korea 6.6GW
India 3.6GW
1.5GW Africa
3.1GW Other Asia Pacific
Brazil 1.2GW
Other C./S. America 1.4GW
Australia/ New Zealand 1.6GW

Mapped: Data Center Capacity Around the World

This was originally posted on our Voronoi app. Download the app for free on iOS or Android and discover incredible data-driven charts from a variety of trusted sources.

Key Takeaways

- Global installed data center capacity stood at 122.2 gigawatts (GW) in 2024.
- Together, the U.S. and China account for 70% of the global total.
- The European Union follows next, with 11.9 GW in capacity.

Today, the U.S. leads globally in data center capacity by a wide margin.

Driven by hyperscalers like AWS, Google Cloud, and Microsoft Azure, billions in investment are supporting foundational AI models. As this momentum continues, these tech giants are expected to remain key drivers of global data center growth.

This graphic shows data center capacity by region, based on data from the IEA.

The Global Concentration of Data Center Infrastructure

Below, we show data center capacity worldwide in 2024:

10 entries per page Search:

Country	Installed Data Center Capacity in Gigawatts
U.S.	53.7
China	31.9
EU	11.9
Japan and Korea	6.6
Other Asia Pacific	3.1
Other North America	1.5
UK	2.6
Africa	1.5
Australia and New Zealand	1.6
India	3.6

Showing 1 to 10 of 15 entries ‹ 1 2 ›

With 53.7 GW of installed capacity, the U.S. accounts for 44% of the global total.

Given the intensifying demand for data centers, hyperscalers are facing infrastructure constraints. New data centers set to be built out by 2028 are completely booked, and Northern Virginia faces power capacity shortages causing project delays.

Meanwhile, public and private entities in China have invested billions in data centers, but an estimated 80% of new infrastructure stands unused.

As we can see, the EU trails behind with 11.9 GW of capacity. Still, electricity demand from data centers is expected to surge 150% by 2035, driven by approximately $231 billion in AI-related investment aimed at tripling capacity by 2032.

Which Countries Are the World's Most Innovative in 2026?

Key Takeaways:

- Switzerland ranks as the world's most innovative economy in 2026, followed by Sweden and the United States.
- Europe accounts for 14 of the top 25 economies, while China is the only upper-middle-income economy in the top 30.

- China ranks 10th overall but fifth in innovation outputs, outperforming several major

How iPhone 18 Pro Prices Compare Worldwide

- The 256GB iPhone 18 Pro costs $1,199 in the U.S., the lowest price among the 35 markets analyzed.
- Türkiye has the highest price at $2,817, roughly 135% more than the U.S. retail price.
- Hong Kong and Malaysia are among the cheapest markets outside North America, while Brazil ranks second-most expensive.

The price of Apple's latest Pro iPhone varies dramatically depending on where it's
