AI ACCELERATORS

NVIDIA GPU Market Share 2024–2026: 87% Peak, What Comes Next

By Silicon Analysts February 21, 2026 5 min read Market Dynamics

EXECUTIVE SUMMARY

NVIDIA commands approximately 80-90% of the AI accelerator market by revenue as of 2025, generating over $100 billion annually from data center GPUs. While percentage share will decline to 75% by 2026 as AMD and custom silicon scale, NVIDIA's absolute revenue continues to grow because the total addressable market is expanding faster than any single competitor can capture.

Feedback

Use in your AI

1. **Revenue Dominance:** NVIDIA data center revenue grew from $15B (2022) to $100B+ (2024), with $130B+ projected for 2025.
2. **Share Trajectory:** Revenue share peaked near 87% in 2024 and is projected to decline to 75% by 2026 as competitors scale.
3. **Manufacturing Economics:** H100 SXM costs $3,320 to manufacture and sells for $27,000 — an 87.7% gross margin.
4. **Competitive Landscape:** AMD is the largest merchant competitor (5-8% share), while hyperscaler custom ASICs target 10-15% by 2026.

accelerator market by revenue as of 2025, generating over $100 billion annually from data center GPUs. Despite growing competition, NVIDIA's CUDA ecosystem, full-stack platform, and priority TSMC CoWoS allocation maintain dominance. This analysis connects market share dynamics to the chip economics that drive them — and lets you model them yourself with our interactive tools.

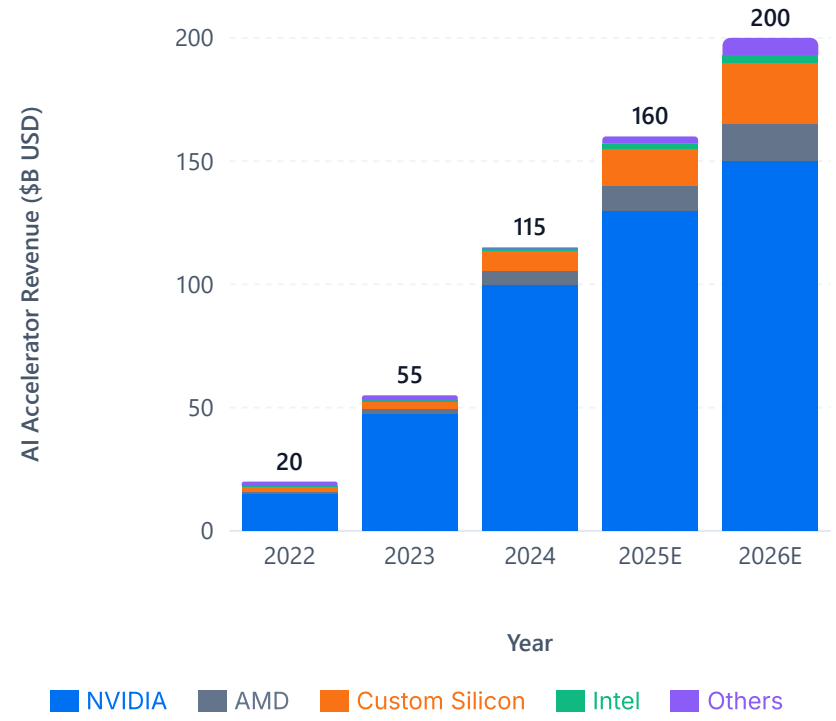

Market Share at a Glance

Market Share Trend: 2022-2026

NVIDIA's percentage share peaked at 87% in 2024 and is projected to decline to 75% by 2026. But the story is not about decline — it is about a market growing so fast that even the dominant player cannot capture all of the expansion.

Source: Silicon Analysts estimates based on public earnings data, Q1 2026

YEAR	KEY DEVELOPMENT	NVIDIA REVENUE	MARKET SHARE
2022	H100 announced, A100 ramp	$15B	75%
2023	H100 ships, demand explodes	$47.5B	86%
2024	Blackwell announced, $100B+ crossed	$100B+	87% (peak)
2025E	AMD MI355X scales, custom silicon grows	$130B+	81%
2026E	Market exceeds $200B, competition broadens	$150B+	75%

Manufacturing Cost Comparison

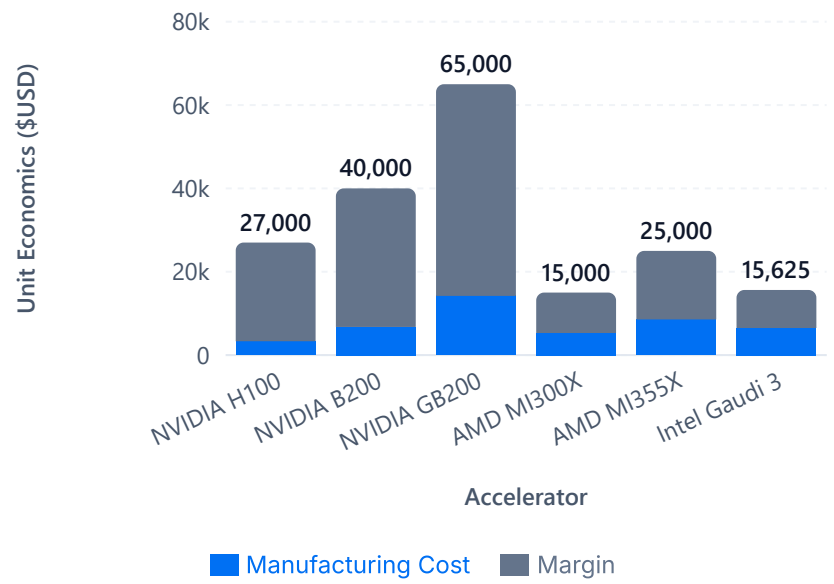

This is where market share meets chip economics. NVIDIA's 85-88% gross margins dwarf AMD's 65-68% and Intel's

58% — funding its R&D pipeline, securing TSMC capacity, and creating pricing flexibility competitors cannot match. See how these chips compare on price vs. performance.

CHIP	NODE	DIE SIZE	MFG COST	SELL PRICE	MA
NVIDIA H100 SXM	TSMC 4N	814 mm²	$3,320	$27,000	8
NVIDIA B200	TSMC 4NP	1,600 mm²	$6,750	$40,000	8
NVIDIA GB200	TSMC 4NP	3,200 mm²	$14,200	$65,000	7
AMD MI300X	N5/N6	1,725 mm²	$5,300	$15,000	6
AMD MI355X	N3P/N6	2,100 mm²	$8,550	$25,000	6

CHIP	NODE	DIE SIZE	MFG COST	SELL PRICE	MA
Intel Gaudi 3	TSMC 5nm	—	$6,500	$15,625	58

Open the Chip Price Calculator pre-loaded with TSMC 4N, 814 mm² die, CoWoS-S packaging, 80GB HBM3

Competitive Landscape

COMPETITOR	PRODUCT	EST. REVENUE (2025)	SHARE	STRENGTHS
AMD	MI300X / MI355X	$10B+	6-8%	288GB HBM3e, price/perf for inference
Google	TPU v5p / Trillium	Internal	5-7%	Vertical integration, JAX/XLA
AWS	Trainium 2	Internal	3-5%	Massive scale, NeuronLink
Microsoft	Maia 100/200	Internal	2-4%	TCO optimization for Azure

COMPETITOR	PRODUCT	EST. REVENUE (2025)	SHARE	STRENGTHS
Meta	MTIA v2	Internal	1-2%	Inference-optimized for ads/reco
Intel	Gaudi 3	$2B	1-3%	Price-to-win, Ethernet networking

AMD is the only merchant alternative. Custom silicon from hyperscalers reduces NVIDIA's addressable market but doesn't compete in the enterprise/sovereign segments where CUDA lock-in is strongest.

Compare all 13 accelerator costs side-by-side in our Cost Bridge Chart, which visualizes manufacturing cost waterfalls

across NVIDIA, AMD, Intel, and hyperscaler ASICs.

Why NVIDIA Dominates — The Structural Moat

1. **CUDA Ecosystem:** 20+ years, 4M+ developers. Every ML framework optimized for CUDA first. Switching costs measured in years, not dollars.

2. **Full-Stack Platform:** GPU + NVLink/NVSwitch + InfiniBand + cuDNN + TensorRT + Triton. Competitors must replicate the entire stack.

Open tool →

3. **Manufacturing Lock:** 60% of TSMC CoWoS capacity. Supply priority is a structural barrier to competitor

scaling. Explore the packaging economics behind this bottleneck.

4. **Pricing Power:** Software lock-in + supply scarcity = 80%+ gross margins. H100 costs $3,320 to make, sells for $27,000.

2026 Outlook

The total market is projected to exceed $200B by 2026. NVIDIA's floor is likely 65-70% share even in the most competitive scenario. Key dynamics:

- **AMD execution** on MI355X (3nm, 288GB HBM3e) with 11% CoWoS allocation — structural production ceiling vs. NVIDIA's 60%
- **Custom silicon scaling** from Google, AWS, Microsoft, Meta — collectively $50B+ investment, reducing hyperscaler GPU purchases
- **US-China export controls** — $5-10B in restricted market revenue, Huawei Ascend 910B filling domestic

gap (see our trade war analysis)

- **CoWoS capacity expansion** — TSMC doubling output by late 2026, all competitors benefit but NVIDIA captures largest share (explore HBM and packaging supply data)

The real question is not whether NVIDIA "loses" — it is how large the overall market becomes.

Frequently Asked Questions

What is NVIDIA's market share in AI accelerators?

NVIDIA holds approximately 80-90% of the AI accelerator market by revenue as of 2024-2025. In training specifically, share exceeds 90%. In inference, 60-75% due to custom silicon and CPU competition. By 2026, overall share is projected to settle near 75% as the total market expands past $200 billion.

How much revenue does NVIDIA make from AI chips?

NVIDIA's data center segment generated $47.5 billion in FY2024 and exceeded $100 billion in FY2025. For FY2026, revenue is projected at $130 billion or more, with Blackwell (B200, GB200) as the primary growth driver. Data center now represents over 80% of total revenue.

How much does an NVIDIA H100 cost to manufacture?

Approximately $3,320 — a sourced total (Raymond James). As we model the allocation of that total: ~$300 for the 814mm² logic die on TSMC 4N, ~$1,350 for 80GB HBM3, ~$750 for CoWoS-S packaging, and ~$920 in test/assembly. At a sell price of $27,000, this yields an 87.7% gross margin. Model your own estimate using our Chip Price Calculator.

Will NVIDIA lose market share in AI?

Percentage share will decline from 87% (2024) to 75% (2026) as AMD and custom silicon scale. But absolute revenue continues growing from $100 billion to $150 billion+

because the total market is expanding faster than share declines. CUDA, full-stack platform, and CoWoS allocation ensure dominance.

How does NVIDIA's margin compare to AMD's?

NVIDIA achieves 79-88% gross margins (87.7% on H100, 84% on B200). AMD's margins are 64-68% (MI300X, MI355X). Intel's Gaudi 3 operates at 58.4%. Explore these economics in our Cost Bridge tool.
